

STORM SUMMARY 12-9-22

A winter weather advisory for the northern tier of counties of Illinois northward into Wisconsin 6am to 1pm. Light rain spread into the area between 4-6am. Rain mixed with snow between 6:30-7am especially near I90 and northward. Areas north of I90 saw the precipitation in the form of mostly snow especially east of Rockford to Lake County as well as parts of northern Cook County.

Precipitation diminished to mostly light rain and drizzle in all areas late morning and early afternoon. Areas around O'Hare just has some accumulation on grass, sidewalks and minimal areas of lots while further north in McHenry and parts of Lake County had streets, parking lots and sidewalks completely cover over with snow. Areas that did not completely cover over had a large amount of slush and many of these properties needed plowing as a salting operation was not effectively clearing those lots.
