

STORM SUMMARY 2-16-24

Clouds built up overnight from a system that mostly passed to our south. This clipped our southern regions during the morning hours near and south I-80 corridor. Temperatures were lingering around 27 degrees. Zero tolerance crews that handle regions south of I-90 were out during the early morning hours applying a deicing application before the start of the business day. For regions north of I-90 our managers were onsite monitoring conditions and proceeded with deicing if conditions warranted.
