

STORM SUMMARY 1-20-16

Light snow spread into Rockford just prior to midnight before moving into the Chicago area 12-1:30am. Light snow diminished to flurries in Rockford by 3am and 5-6am in the Chicago area. Flurries then lingered till late morning. Temperatures were in the mid teens during the duration of the snow and surface temperatures were also in the teens. Because of the lingering cold temperatures some lots needed to be plowed and then salted and others we were able to only have two applications of salt in order to get the snow to finally melt. ORD officially received .9 which pushed the monthly total to 5.9 and the season to date total to 21.6.
