

STORM SUMMARY 2-24 & 25-16

Winter storm watches were issued for Lake, DuPage, Kendall, Grundy Counties while winter storm warning covered Cook, Will and Kankakee Counties 9am on the 24th to 4am on the 25th. Snow and Rain spread into northwest Indiana as well as parts of Will, Kankakee and southern Cook County 7-9am. The rain part did not last long before it changed to all snow. The activity stayed out of the Rockford area on the 24th with just some flurries there predawn on the 25th. The combination of air and pavement temperatures above freezing during the storm really prevented snow from accumulating on the pavement in some areas except in the areas that got decent snowfall amounts in southern Cook County southward as well over northwest Indiana where blizzard conditions prevailed. Temperatures briefly slipped to 32 during the early evening hours before bouncing back up to the mid 30s by 9pm. The main snowfall ended just prior to midnight in Cook and Kankakee Counties. Some additional very light flakes in the form of flurries fell 4-6am on the 25th.

Officially ORD had 1.7 inches which pushed the season.
