

STORM SUMMARY 2-29-16 & 3-1-16

Winter storm warning Rockford eastward to Lake County went into effect at 9pm along with a winter weather advisory for DeKalb County eastward to Cook County the same time frame. The winter storm warning was later changed to a winter weather advisory at 4am on 3-1. Light rain began in Rockford during the evening and later changed to light snow 9-10pm. Warm pavement temps prevented any accumulation at Rockford through midnight. Eventually Rockford did end up with .5 of snow. Heavier snow totals occurred north of Rockford closer to the IL/WI border eastward to Lake County. Light rain and drizzle occurred between 7pm and nearly midnight south of I90. There was then a gap in the activity before freezing rain, freezing drizzle returned 3-5am and changed to snow by late am. This activity diminished to flurries after 2pm. While snow amounts were light south of I90 there were some impressive snow totals mainly northeast Lake County. Most areas only needed salting while plowing was needed in the higher snow total areas.
