

STORM SUMMARY 12-24 & 25-17

A winter weather advisory ran from 6am to 6pm for the area except Rockford through Lake County. Snow diminished to very light snow and flurries by late afternoon with this activity diminishing by 8-9pm. This was followed by some flurries after 10pm. Much of the area was between 1-3 inches which required multiple salting applications and plowing. ORD officially had 1.9", Rockford 1", Romeoville 2.1". On Christmas day 12-25-17 there was a band of flurries that moved through between 4-7am. The majority of the area had a trace but ORD received .1" which brought the entire system to 2". As this was a fluffier snow when the winds pick up and became gusty throughout the day, this caused the snow to blow and drift back on to sidewalks and parking lots. Most lots needed plowing cleanups and an additional application of salt to treat surfaces.
