

## STORM SUMMARY 12-7-17

A fast moving weak upper level feature produced some flurries and embedded snow showers mainly during the predawn hours with light flurries again mid to late am. While most areas had only trace amounts there was a band of the mentioned snow showers that moved from around Sycamore/Cortland in Dekalb County eastward into Kane County around 2-4am and then raced across portions of Dupage County. The area received a dusting to a light coating on lots or part of lots. The west wind seemed to blow some of the snow off of paved surfaces as more snow collected on grass than on asphalt. Nevertheless, areas required salting. Officially, ORD had a trace, Rockford Airport .2, Romeoville trace and MDW .1
