

## STORM SUMMARY 2-21-18

Rain fall produced 2-4 inches of rain across the area 2-20 into 2-21. This resulted in flooding issues and standing water on surfaces. The rainfall diminished prior to midnight for Rockford and McHenry as well as for much of Lake and DeKalb Counties. The rain diminished over the remainder of the area between 1-3am. The area saw surfaces begin to ice up prior to dawn on 2-21 resulting in the need for salting to create a safe environment prior to the work day beginning. Temperatures ended up bottoming out in the mid 20s after daybreak on 2-21, surfaces that were not salted did ice up prior and during the morning commute causing many slip and falls.
