

STORM SUMMARY 3-6-18

We got into an active weather pattern during the March 5th through March 7th period. The most significant precipitation during this period fell on 3-5. An upper level feature then dominated the weather situation for 3-7. Light snow and snow showers occurred off and on after 5 am on 3-6 till midnight. There was some rain and sleet that mixed in at times during the afternoon and early evening. Surface temps were around freezing near dawn but quickly rose into the mid 40's by mid am. Surfaces were mostly wet during the work day through midnight. Prior to 7am, surfaces iced up that weren't treated.
