

STORM SUMMARY 11-17-18

Another system which cranked out a lot of moisture began around 11pm on the 16th and continued into the afternoon on Saturday the 17th. The heaviest activity was between 5am – 10am as the air temperature and ground temperatures were coolest during the first part of the timeframe that's when some accumulation occurred. After 9am temperatures began to rise and sub surfaces were warm and prevented any additional accumulation. Some areas saw up to 2" on the grass. All zero tolerance salt trucks and sidewalk crews were dispatch to treat all surfaces.
