

STORM SUMMARY 11-30-18

Some areas of light rain, drizzle and mixed sleet encountered the area during the evening of the 29th and continued in to the 30th till about 6am. The amounts were under 1/10 of an inch but with the fog that set in around the 3am hour this helped crystallize the moisture creating freezing rain and a dangerous situation. We monitored surfaces from 12-2am and made the decision to dispatch crews at 2:30am to treat all surfaces as conditions changed quickly and deicing was needed.
