

## STORM SUMMARY 4-18 & 19-18

A mixture of rain and sleet transitioned to all snow during the afternoon on the 18<sup>th</sup>. The snow continued through late evening and into the early morning hours on the 19<sup>th</sup> until finally exiting the area around 3-4 am. Accumulation ranged from 1 to 2" which mostly occurred on grass areas but because this occurred during the evening hour's surfaces cooled down enough to allow for elevated and parking surfaces to cover completely over. Raised surfaces such as parking garages needed to be fully plowed. All zero tolerance properties needed deicing of sidewalks and parking surface before the start of Thursdays work day.
