

## STORM SUMMARY 1-2-19

Several areas had precipitation reach the ground in the form of patchy freezing drizzle and mist. This light moisture continued throughout the day until 9-10pm and with surface temperatures remaining below freezing in the 29-30 degree range many surfaces became slick. Non zero tolerance customers began calling for service around 9am as conditions worsened and this became more prevalent as the morning continued on. Zero tolerance customers were treated where needed if surfaces were not dry as temperatures remained below freezing all day and into the overnight hours.
