

STORM SUMMARY 1-25-19

A quick moving clipper system produced a period of light snow for the area. Snow spread into the area from west to east 1-3pm and ending 7-9pm. This was a light and fluffy snow. For a change, snow amounts were higher in the south suburbs. Cold air and surface pavement temperatures prevented salt from working in some areas so despite the low amount, some plowing was needed to clear the snow.
