

STORM SUMMARY 11-7-19

Precipitation started very light around 7 PM and continued until around 4am on the 7th when it finally exited the area. During the early hours of the event the activity stayed relatively I90 northward. Hardscape surfaces were still wet around 9pm but that turned to freezing rain and sleet around 11pm. Several blasts covered the area during the early morning hours which effected areas as far south I88. We dispatched our zero tolerance & icy condition crews around 2am to service these properties before the start of the workday.
