

## STORM SUMMARY 12-11-19

A weakening clipper system produced a period of light snow flurries for the area starting between 5-7am and any accumulating snow was pretty much over by 9am. Areas from I88 northward had amounts mainly between a trace and .3 while amounts over LaSalle and Grundy Counties were under an inch. This was a salting event for most of the regions we cover. Officially Rockford and O'Hare both had .1 of snow, Midway trace and Romeoville .1
